Journal of
Materials
Processing
Technology

Subject Index of Volume 87

Accuracy
analysis of factors influencing accuracy in the drawing of round rods, 90
Adaptive turning operations
a scheme of adaptive turning operations, 119
Additives
the effect of additives on the crystallization of Na_2O–CaO–MgO–Al_2O_3–SiO_2–TiO_2 system glasses, 192
AISI 4340
mechanical properties and microstructural features of AISI 4340 high-strength alloy steel under quenched and tempered conditions, 198
Aluminium
extrusion, channel, and profile bending: a review, 1
Aluminium cups
the redrawing of cups at a redraw ratio of 3 using an annular urethane pad, 128
Aluminum sheet
predictions of texture and plastic anisotropy developed by mechanical deformation in aluminum sheet, 146
Automatic modeling
A CAD/CAM system for deep drawing dies in a simple-action press, 258
Automatic remeshing
automatic remeshing of 2D quadrilateral elements and its application to continuous deformation simulation: part II. applications, 179
Bending
extrusion, channel, and profile bending: a review, 1
Blanking die-set
A CAD/CAM system for deep drawing dies in a simple-action press, 258
Boundary-elements
combined finite element–boundary element thermo-mechanical analysis of metal forming processes, 247
BUE
the machinability of KOVAR material, 112
CAD/CAM
an automatic process planning system for the quick generation of manufacturing process plans directly from CAD drawings, 97
CAD/CAM system
A CAD/CAM system for deep drawing dies in a simple-action press, 258
Caliber rolling
proposal of a new method for the spread rolling of thin strips, 207
CAPP
an automatic process planning system for the quick generation of manufacturing process plans directly from CAD drawings, 97
Carbide
micro-hole machining of carbide by electric discharge machining, 139
Carbon steel
bridging the joint gap with wire feed laser welding, 213
Channel sections
extrusion, channel, and profile bending: a review, 1
Contrast correlation technique
an experimental and numerical study of a planar blanking process, 266
Control
extrusion, channel, and profile bending: a review, 1
Counter-blow hammer
a comparison between two wear models, 223
Crystallization
the effect of additives on the crystallization of Na_2O–CaO–MgO–Al_2O_3–SiO_2–TiO_2 system glasses, 192
Cutting tool
a scheme of adaptive turning operations, 119
Damping capacity
damping behavior and tribological properties of as-spray-deposited high silicon alloy ZA27, 53
Deep drawing die-set
A CAD/CAM system for deep drawing dies in a simple-action press, 258
Deformation characteristics
proposal of a new method for the spread rolling of thin strips, 207
Deformation field
an experimental and numerical study of a planar blanking process, 266
Diameter
neutralising the influence of spread on the diameter of processed holes by means of surface plastic deformation, 64
Dielectrics
influence of kerosene and distilled water as dielectrics on the electric discharge machining characteristics of Ti–6A1–4V, 107
Dies
methodology for service life increase of hot forging tools, 237
Diffusion wear
the machinability of KOVAR material, 112
Discontinuous reinforcement
mathematical modelling for electric discharge machining of aluminium–silicon carbide particulate composites, 59
Drawing
analysis of factors influencing accuracy in the drawing of round rods, 90
Dynamic recrystallisation
the prediction of the hot strength in steels with an integrated phenomenological and artificial neural network model, 131
Elastic characteristics
assessment of the elastic characteristics of an 'infinite stiffness' physical modelling press, 28
Elasto-plasticity
analysis of factors influencing accuracy in the drawing of round rods, 90
Electrical discharge machining
influence of kerosene and distilled water as dielectrics on the electric discharge machining characteristics of Ti–6A1–4V, 107

Elsevier Science S.A.
PII S0924-0136(98)00374-4

Electric discharge machining
mathematical modelling for electric discharge machining of aluminium–silicon carbide particulate composites, 59
micro-hole machining of carbide by electric discharge machining, 139
Electrode wear ratio
micro-hole machining of carbide by electric discharge machining, 139
Expansion
micro-hole machining of carbide by electric discharge machining, 139
Experimental investigation
numerical and experimental investigation of the laser forming process, 281
Expert system
an automatic process planning system for the quick generation of manufacturing process plans directly from CAD drawings, 97
Extrapolation
the prediction of the hot strength in steels with an integrated phenomenological and artificial neural network model, 131
Extrusion
extrusion, channel, and profile bending: a review, 1
Factor
design and performance analysis of TiCN-coated cemented carbide milling cutters, 82
FE analysis
assessment of the elastic characteristics of an 'infinite stiffness' physical modelling press, 28
automatic remeshing of 2D quadrilateral elements and its application to continuous deformation simulation: part I. remeshing algorithm, 165
FE simulation
automatic remeshing of 2D quadrilateral elements and its application to continuous deformation simulation: part II. applications, 179
Filler wire
bridging the joint gap with wire feed laser welding, 213
Finish cutting
determination of finish-cutting operation number and machining-parameters setting in wire electrical discharge machining, 69
Finite element
comparative studies on stresses in weld-bonded, spot-welded and adhesive-bonded joints, 230
Finite-element method
analysis of factors influencing accuracy in the drawing of round rods, 90
Finite elements
hydroforming of sheet metal pairs, 154
Finite-elements
combined finite element–boundary element thermo-mechanical analysis of metal forming processes, 247
Flexible manufacturing
multi-point forming: a flexible manufacturing method for a 3-d surface sheet, 277
Full-scale experiments
a comparison between two wear models, 223
Globular microstructure
the influence of induction heating on the microstructure of A356 for semi-solid forging, 46
Group technology
an automatic process planning system for the quick generation of manufacturing process plans directly from CAD drawings, 97
Hardness
bridging the joint gap with wire feed laser welding, 213
Heat affected zone
bridging the joint gap with wire feed laser welding, 213
Heat treatment
the effect of additives on the crystallization of Na_2O–CaO–MgO–Al_2O_3–SiO_2–TiO_2 system glasses, 192
High-strength alloy steel
mechanical properties and microstructural features of AISI 4340 high-strength alloy steel under quenched and tempered conditions, 198
Hollow bodies
hydroforming of sheet metal pairs, 154
Hot forging
methodology for service life increase of hot forging tools, 237
Hot rolling
the prediction of the hot strength in steels with an integrated phenomenological and artificial neural network model, 131
Hydroforming
hydroforming of sheet metal pairs, 154
Induction heating
the influence of induction heating on the microstructure of A356 for semi-solid forging, 46
In-flight behaviour
in-flight behaviour of steel particles during plasma spraying, 37
IPANN model
the prediction of the hot strength in steels with an integrated phenomenological and artificial neural network model, 131
Joint gap
bridging the joint gap with wire feed laser welding, 213
KOVAR
the machinability of KOVAR material, 112
Laser forming
numerical and experimental investigation of the laser forming process, 281
Laser welding
bridging the joint gap with wire feed laser welding, 213
Lateral spread
proposal of a new method for the spread rolling of thin strips, 207
Level
design and performance analysis of TiCN-coated cemented carbide milling cutters, 82
Machining parameters
determination of finish-cutting operation number and machining-parameters setting in wire electrical discharge machining, 69
Measurement
assessment of the elastic characteristics of an 'infinite stiffness' physical modelling press, 28
Mesh re-generation
automatic remeshing of 2D quadrilateral elements and its application to continuous deformation simulation: part I. remeshing algorithm, 165
Metal forming
combined finite element–boundary element thermo-mechanical analysis of metal forming processes, 247
Metal matrix composites
mathematical modelling for electric discharge machining of aluminium–silicon carbide particulate composites, 59
Micro-hole
micro-hole machining of carbide by electric discharge machining, 139
Microstructure
bridging the joint gap with wire feed laser welding, 213
Modelling
hydroforming of sheet metal pairs, 154
Multi-point forming
multi-point forming: a flexible manufacturing method for a 3-d surface sheet, 277

Numerical simulation
methodology for service life increase of hot forging tools, 237
numerical and experimental investigation of the laser forming process, 281
Offset
determination of finish-cutting operation number and machining-parameters setting in wire electrical discharge machining, 69
Particle mass loss
in-flight behaviour of steel particles during plasma spraying, 37
Percentage contribution
design and performance analysis of TiCN-coated cemented carbide milling cutters, 82
Physical modelling press
assessment of the elastic characteristics of an 'infinite stiffness' physical modelling press, 28
Planar blanking
an experimental and numerical study of a planar blanking process, 266
Plasma–particle interactions
in-flight behaviour of steel particles during plasma spraying, 37
Plasma spraying
in-flight behaviour of steel particles during plasma spraying, 37
Plastic anistrophy
predictions of texture and plastic anisotropy developed by mechanical deformation in aluminum sheet, 146
Plastic deformation
automatic remeshing of 2D quadrilateral elements and its application to continuous deformation simulation: part II. applications, 179
automatic remeshing of 2D quadrilateral elements and its application to continuous deformation simulation: part I. remeshing algorithm, 165
Plasticene
proposal of a new method for the spread rolling of thin strips, 207
Polarity
micro-hole machining of carbide by electric discharge machining, 139
Polycrystalline
predictions of texture and plastic anisotropy developed by mechanical deformation in aluminum sheet, 146
Processed holes
neutralising the influence of spread on the diameter of processed holes by means of surface plastic deformation, 64
Processes
extrusion, channel, and profile bending: a review, 1
Profiles
extrusion, channel, and profile bending: a review, 1
Quadrilateral elements
automatic remeshing of 2D quadrilateral elements and its application to continuous deformation simulation: part I. remeshing algorithm, 165
Redrawing experiments
the redrawing of cups at a redraw ratio of 3 using an annular urethane pad, 128
Roll pass design
proposal of a new method for the spread rolling of thin strips, 207
Rules base
A CAD/CAM system for deep drawing dies in a simple-action press, 258
Semi-solid forging
the influence of induction heating on the microstructure of A356 for semi-solid forging, 46
Service life
methodology for service life increase of hot forging tools, 237
Sheet metal
an experimental and numerical study of a planar blanking process, 266
Sheet metal forming
hydroforming of sheet metal pairs, 154
multi-point forming: a flexible manufacturing method for a 3-d surface sheet, 277
Signal-to-noise ratio
design and performance analysis of TiCN-coated cemented carbide milling cutters, 82
Simulation
extrusion, channel, and profile bending: a review, 1
Single-side notch
micro-hole machining of carbide by electric discharge machining, 139
Soaking period
the influence of induction heating on the microstructure of A356 for semi-solid forging, 46
Solid fraction
the influence of induction heating on the microstructure of A356 for semi-solid forging, 46
Spead
neutralising the influence of spread on the diameter of processed holes by means of surface plastic deformation, 64
Spray deposition
damping behavior and tribological properties of as-spray-deposited high silicon alloy ZA27, 53
Spread rolling
proposal of a new method for the spread rolling of thin strips, 207
Stainless steel
bridging the joint gap with wire feed laser welding, 213
Steel
extrusion, channel, and profile bending: a review, 1
Step heating
the influence of induction heating on the microstructure of A356 for semi-solid forging, 46
Stress analysis
comparative studies on stresses in weld-bonded, spot-welded and adhesive-bonded joints, 230
Strip rolling
proposal of a new method for the spread rolling of thin strips, 207
Surface plastic deformation
neutralising the influence of spread on the diameter of processed holes by means of surface plastic deformation, 64
Surface roughness
the machinability of KOVAR material, 112
System development
automatic remeshing of 2D quadrilateral elements and its application to continuous deformation simulation: part II. applications, 179
Taguchi method
determination of finish-cutting operation number and machining-parameters setting in wire electrical discharge machining, 69
Tempering
mechanical properties and microstructural features of AISI 4340 high-strength alloy steel under quenched and tempered conditions, 198
Tensile strength
bridging the joint gap with wire feed laser welding, 213
Thermal cracking
methodology for service life increase of hot forging tools, 237
Thermal stress
numerical and experimental investigation of the laser forming process, 281

Thermo-mechanical
combined finite element–boundary element thermo-mechanical analysis of metal forming processes, 247
The smaller the better
design and performance analysis of TiCN-coated cemented carbide milling cutters, 82
Three-dimensional surface
multi-point forming: a flexible manufacturing method for a 3-d surface sheet, 277
Ti–6A1–4V
influence of kerosene and distilled water as dielectrics on the electric discharge machining characteristics of Ti–6A1–4V, 107
Tool design
A CAD/CAM system for deep drawing dies in a simple-action press, 258
Tool path generation
A CAD/CAM system for deep drawing dies in a simple-action press, 258
Tools
methodology for service life increase of hot forging tools, 237
Tool wear
a scheme of adaptive turning operations, 119
Tribological properties
damping behavior and tribological properties of as-spray-deposited high silicon alloy ZA27, 53
Urethane pad
the redrawing of cups at a redraw ratio of 3 using an annular urethane pad, 128
Wear
a comparison between two wear models, 223
Weld-bond
comparative studies on stresses in weld-bonded, spot-welded and adhesive-bonded joints, 230
Weld metal
bridging the joint gap with wire feed laser welding, 213
Wire electrical discharge machining
determination of finish-cutting operation number and machining-parameters setting in wire electrical discharge machining, 69
Work-hardening
the prediction of the hot strength in steels with an integrated phenomenological and artificial neural network model, 131
Zinc–aluminium alloy
damping behavior and tribological properties of as-spray-deposited high silicon alloy ZA27, 53
